

Drinking water supply from Koudiat Rosfa dam

The town of Tissemsilt and surrounding areas are supplied with drinking water from Koudiat Rosfa dam by means of a 53 km cast iron main (\varnothing 800 mm) and 85 km of off-takes cast iron secondary connections.

The design flow is 748 l/s at the head of the system. The transfer requires 12 pumping stations and 5 energy dissipation chambers.

As assistant to the Owner, STUCKY Ltd, in association with STUCKY-ENHYD SpA, is in charge of checking and approving drawings and design reports, technical assistance (on site) and work supervision (site supervision and quality control). Duration of services: 2006-2008

The Agence Nationale des Barrages et Transferts (ANBT) is acting as delegated project director.

Construction of a pumping station
